Real time Situational Awareness of WAMS at San Diego Gas and Electric

Tariq Rahman, Subburaman Sankaran,
San Diego Gas & Electric
C. Wells, B. Bachiega, OSIsoft, LLC and
R. Atkinson, Process Innovations
San Diego Gas and Electric

- Subsidiary of Sempra Energy
- Regulated public utility
- Provide safe and reliable energy service to 3.4 million consumers
  - 1.4 million electric meters
  - 800,000 natural gas meters
- 4,100 square mile service territory in San Diego and southern Orange Counties (25 cities)

- 1,800 miles of electric transmission lines and 21,600 miles of electric distribution lines
- Two compressor stations, 160 miles of natural gas transmission pipelines, 8,100 miles of distribution pipelines and 6,200 miles of service lines
- 4,500 employees

San Diego Gas & Electric
Wide Area Measurement System

• Goals
  – Provide improved situational awareness to operators
  – Compute critical angle differences in real time
  – Compute and display grid oscillations
  – Determine data storage requirements for future expansions
  – Evaluate new event detection and system modeling technology
System Architecture
Data volume

- 90 PMUs (Approaching 100 by end of 2014)
  - Each with 25 measured variables
  - 2250 measured values each 30 times per second
  - 67,500 events per second to the PI system
  - Average compression 20 percent of volume
  - Raw data = 31 GB per day
  - Compressed data = 31*0.2= 6.2 GB /day

San Diego Gas & Electric
Applications

- Overview Graphics (zoom with interactions)
- Voltage and frequency alarms
- Real and Reactive power alarms
- Island detection
- Phase angle chart
- Phase angle difference
- FFTs for oscillation
- PQ and PV charts for stability

San Diego Gas & Electric
Basic Graphics

San Diego Gas & Electric
Voltage and Frequency Alarms

San Diego Gas & Electric
Real and Reactive Power Alarms

San Diego Gas & Electric
Phase angle chart
Phase angle differences

San Diego Gas & Electric
FFT for Oscillation detection
Damping surface
Phase angle chart
PQ & PV Charts

San Diego Gas & Electric
Status

- Phase I complete
- Phase II commenced (October 2013)
- Includes:
  - Enhanced graphics
  - Automatic event detection
  - Automatic dynamic modeling (realization).
• Thank you for attending this presentation
