

FOA 1861 - A Precursor to New Research

April 13, 2022

Eric Andersen
PNNL Project Manager

PNNL-SA-172079

PNNL is operated by Battelle for the U.S. Department of Energy

FOA 1861

A Precursor to New Research

- Making the Anonymized Dataset Available for Additional Research
 - There have been numerous requests for access to the anonymized data set
 - We are in the process of modifying the NDAs with the Data Providers to enable additional use of the anonymized data set
 - Additional synchrophasor data is being added where possible
 - *If and when we are able to provide the anonymized data set for others to use, the data users will have to establish an NDA with PNNL (PNNL has an NDA template)*
- Other Projects
 - Signature Library - extract disturbance signatures from the dataset and make them available for R&D and educational purposes
 - Utility Data Sharing Risks – better understand the risks to utilities, and help them with mitigation strategies to limit those risks

If you have any questions regarding the data used for these projects, please contact Jim Follum at james.follum@pnnl.gov

Thank you
